Hello All, attached is information I received from Cascade drilling. We are still a go for drilling starting next week. Intent is to start field work at 8:00 am Monday July 11<sup>th</sup>. We may have the UVOST (LIF) capabilities, but won't know until the last minute (it really depends if the project it is being used on is completed before the crew mobilizes to WI). If so, intent is to LIF the source to define LNAPL body (if there is one) and to also know where not to advance MiHPT borings.

Overall intent is to attempt to define both the vertical and lateral extents of the petroleum related groundwater contaminant plume identified in the area of Tower Standard. We have discussed the intent and limitations of this technology quite a bit since the May 2016 meeting. This process will be iterative and boring locations will be based on site knowledge, MiHPT logs, drillers recommendations and collaborative discussions between all parties. We have the drillers scheduled for the entire week, but it may take the entire week to complete our goals.

If anyone has any specific concerns regarding this SOW, please contact me at your earliest convenience.

Kristen, if you need additional information to allow the tribe to grant approval of this SOW, please let me know right away.

I had another conversation with Linda Kozak today and she would really appreciate it if we tried to limit our access to their property. With that being said, please park on the old restaurant property. See you all on Monday.

Thank you,

David N. Larsen P.G

Hydrogeologist / Professional Geologist
